DETAILED ACTION

1. Claims 1-34 are presented for examination. Claim 35 is cancelled.

Allowable Subject Matter

2. Claims 1-34 are allowed.
3. The following is an examiner's statement of reasons for allowance:

All the claims are allowed for at least the following reason.

- a. All the claims detailed a method and a computer readable medium for reducing stack memory resources in a computer system that executes concurrent threads to handle requests for user sessions over the network. A new thread programming technique that is highly scalable and comparatively simple to program and upgrade provides handling of a large number of user sessions. The invention permits a reduction in the stack memory allocated to a computer thread, which reduces the system penalty when large numbers of threads are used. Each segment of program code to be run on a thread, the program code for executing an active network session, is classified based upon the stack memory size required to execute any function call within the segment. The stack memory size allocated to the thread is preferably sufficient to handle the requirements of a first class of function calls. The computer thread utilizes a predetermined auxiliary stack to execute program code function calls requiring substantial stack memory size and reclaims the auxiliary stack when it is no longer necessary to execute the code of the segment.

Segments of the program code of a class having function calls requiring substantial stack resources are wrapped in a wrapper that calls an auxiliary stack for executing the function

call and in which the wrapper returns the auxiliary stack when the function call is completed. The auxiliary stack is a shared stack or a new stack from a pool of stacks.

The prior art does not include teachings of each segment of a program code executed by a thread for handling an active network session that is classified based upon the stack memory size required to execute function call within the segment and to utilize a predetermined auxiliary stack to execute the program code function calls requiring substantial stack memory size and to reclaim the auxiliary stack when it is no longer necessary to execute the code of the segment. Therefore the claims are allowable over the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
